## WEB DEVELOPMENT

### Diploma

#### **Continuing education in web development – OpenClassRooms (OC)**

Realisation of 6 projects requiring skills in HTML, CSS, Sass, Git, Javascript, Node.js, MongoDB and React. These projects are **described further below**.  
Completion of an earlier site with a form based on PHP and MySQL

<https://github.com/tom-training>  
[www.thomasgue.info](http://www.thomasgue.info)

### Project 7 **OC**

#### **Kasa – a fictional online marketplace for short-term homestays**

This project was developed with the framework REACT and focuses only on the frontend. The React environment is installed with Create React App. This project introduced me to the type of architecture based on REACT functional components as well as the REACT basic tools and concepts such as props, hooks (useEffect, useState), props with styled-components, the JSX. The navigation is based on react-router-dom

[https://github.com/tom-training/ThomasGue\\_7\\_16012023.git](https://github.com/tom-training/ThomasGue_7_16012023.git)

### Project 6 **OC**

#### **Piquante - API for a fictional app publishing crowd-source reviews about sauce recipes**

This project is backend oriented as the frontend was already developed. It required to adjust to the frontend and build an API based on a Node.js environment. This API works with the frontend and serves and exploits a MongoDB database for which I had done the setup and designed the models with mongoose. The development of security and authorisation devices is done with packages such as jsonwebtoken, bcrypt and password-validator. I have coded all the CRUD routes in an Express Framework environment and additional packages were used in doing so: multer, path, dotenv, cors. This API structure is a combination of various types of js files: models, middlewares, controllers, routes

### Project 5 **OC**

#### **Kanap - a fictional e-commerce website selling furniture**

This project is frontend oriented but focuses on the calls to the API which is already set up, for GET and POST calls the function fetch along with various js tools and methods such as: localStorage, searchParams, JSON are used. This project is built on traditional html files combined with js files using the DOM events and elements to enable this dynamic app reading, collecting and transmitting data to the backend

[https://github.com/tom-training/ThomasGue\\_5\\_04022022.git](https://github.com/tom-training/ThomasGue_5_04022022.git)

### Project 4 **OC**

#### **Chouette Agence - a fictional institutional website**

The aim of this project was to do some corrections on an existing website and optimize it on aspects such as its SEO, its accessibility (WCAG), its loading time and performances. For that purpose, I worked on concepts and tools such as: native html tags, aria-label, changing file format, resizing pictures, pictures compressing, use of lighthouse to assess improvements, the use of the w3c validators and the developer tools

[https://github.com/tom-training/ThomasGue\\_4\\_25112021.git](https://github.com/tom-training/ThomasGue_4_25112021.git)

### Project 3 OC

#### Oh My Food - a fictional restaurant directory app

This project is frontend oriented, it uses CSS animations such as loading spinners, hover responsive elements, appearances and disappearances of components, rotations with the use of the properties keyframes, transitions, pseudo-element, opacity, z-index. I used SASS for the style and got acquainted with some of its assets and rules such as: @mixin, SASS maps, SASS variables, nesting syntax, the ampersand, the selector combinators, the CSS specificity... I got familiar with npm commands and installed SASS and autoprefixer

[https://github.com/tom-training/ThomasGue\\_3\\_21092021.git](https://github.com/tom-training/ThomasGue_3_21092021.git)

### Project 2 OC

#### Reservia - a fictional marketplace for short term homestays

This project is frontend oriented, it focused on the fundamentals of HTML, CSS, git and github and how to make responsive applications. The use of CSS properties such as FlexBox, Grid, object-fit, order, flex-direction, position, the CSS media queries, the use of the developer tools...
